

CLAIMS

What is claimed is:

1. A method of directing message streams comprising:
assigning at least one of a plurality of data types to at least one of a plurality of data streams; and
assigning said at least one of a plurality of data streams to at least one of a plurality of devices.
2. The method of claim 1 wherein said plurality of data types are selected from error data, warning data, failure data, report data, and time data.
3. The method of claim 1 wherein said plurality of data streams are selected from an error stream, a warning stream, a failure stream, a report stream and a time stream.
4. The method of claim 1 wherein said plurality of devices are selected from a message window, a status window, a report window, a message box, and a file.
5. The method of claim 1 wherein said assigning at least one of a plurality data types is done though a software interface presented to a user.
6. The method of claim 1 wherein said assigning at least one of a plurality data streams is done though a software interface presented to a user.
7. A computer program product comprising a computer usable medium having computer readable code thereon, including program code comprising:
instructions for assigning at least one of a plurality of data types to at least one of a plurality of data streams; and
instructions for assigning said at least one of a plurality of data streams to at least one of a plurality of devices.

8. The computer program product of claim 7 wherein said plurality of data types are selected from error data, warning data, failure data, report data, and time data.

9. The computer program product of claim 7 wherein said plurality of data streams are selected from an error stream, a warning stream, a failure stream, a report stream and a time stream.

10. The computer program product of claim 7 wherein said plurality of devices are selected from a message window, a status window, a report window, a message box, and a file.

11. The computer program product of claim 7 wherein said assigning at least one of a plurality data types is done through a software interface presented to a user.

12. The computer program product of claim 7 wherein said assigning at least one of a plurality data streams is done through a software interface presented to a user.
